INTRODUCTION

While information on ages was collected in the 1961 Census by single years, age statistics are published by five-year age groups. Error in reporting of specific ages thus has little effect on the accuracy of age statistics when published by these groupings. Also, five-year age groups are sufficiently detailed for most requirements. However, cases do arise where figures by individual years, or for age groups not corresponding with the five-year intervals, are desirable. The following age tables graduated by single years of age were prepared for this purpose.

The data for these tables were calculated in such a way that the discrepancies in the numbers at certain ages arising from any tendency to cluster at specific ages, particularly at ages ending in "0" and "5", have been largely eliminated. The method used is described in the following paragraphs.

The population in the groups over 4 years of age has been graduated by means of a formula whereby the five-year totals reproduce exactly the published census figures. In effect, the formula puts a simple curve through each year of age in such a manner that the total under the curve for the five-year age group is the same as that actually enumerated. The curves for successive five-year intervals are made to run smoothly into one another. In order to avoid the difficulty and inaccuracy of doing this graphically, the process has been reduced to a formula which is adapted to ordinary calculating machines.

The population of each individual age under 5 years was calculated on the basis of Vital Statistics records of births and deaths and a count of immigrants under 5 years of age obtained from the Department of Citizenship and Immigration. Accurate birth and death records permit more accurate information to be obtained by this method than by the formula method used for succeeding age groups.

Bien que, lors du recensement de 1961, les renseignements aient été recueillis par année d'âge, la statistique des âges est publiée par groupe quinquennal. Toute erreur de déclaration d'âge précis n'a donc guère d'influence sur la précision de la statistique des âges ainsi publiée par groupe. En outre, les groupements quinquennaux sont suffisamment détaillés pour la plupart des besoins. Toutefois, il se présente des cas où il est nécessaire d'avoir des chiffres par année d'âge ou par groupe d'âge qui ne correspond pas aux groupes quinquennaux. C'est à cette fin qu'ont été préparés les tableaux ci-après par année d'âge.

Les données de ces tableaux ont été calculées de façon à éliminer en majeure partie les écarts numériques propres à certains âges du fait de la tendance à ramener les âges à certains âges donnés, en particulier aux âges terminés par "0" ou par "5". Voici la méthode utilisée à cette fin.

La population des groupes de plus de 4 ans d'âge a été graduée au moyen d'une formule qui fait que les totaux quinquennaux donnent exactement les chiffres publiés du recensement. De fait, au moyen de cette formule, on fait passer une courbe à travers chaque année d'âge de telle sorte que le total qui paraît sous la courbe du groupe quinquennal est le même que celui des personnes effectivement dénombrées. Les courbes des intervalles quinquennaux successifs sont telles qu'elles passent facilement l'une dans l'autre. Afin d'éviter la difficulté et l'inexactitude que supposerait une représentation graphique, le procédé a été ramené à une formule qui s'adapte aux machines à calculer ordinaires.

La population à chaque année d'âge de moins de 5 ans a été calculée d'après les chiffres de la statistique de l'état civil (naissances et décès) et d'après un comptage des immigrés âgés de moins de 5 ans obtenu du ministère de la Citoyenneté et de l'Immigration. Des chiffres exacts sur les naissances et les décès permettent d'obtenir des renseignements plus précis au moyen de cette méthode qu'en utilisant la formule qui sert aux groupes d'âge suivants.
